FARHAN TAUFIK SYABAN

Geologist & Software Engineer — Applied Geo-Data

Bandung, Indonesia | +62 821 4805 6518 | farhantaufiks@gmail.com | farhantaufiks.com

PROFILE

Geologist turned software engineer, working at the intersection of earth-science domain knowledge and hands-on engineering. Geological Engineering degree plus petrophysics research experience (reservoir characterisation, porosity, water saturation and rock-physics analysis), followed by 5 years building and shipping production data systems — REST APIs, large-scale data migration and ETL pipelines, and a maintained Python SDK. Daily user of agentic coding tools (Claude Code) since early 2025. Comfortable turning messy, real-world datasets into reliable outputs and clear deliverables, and translating technical work for non-technical stakeholders through technical planning documents and cross-team delivery. Keen to reapply this geoscience + engineering blend to applied AI for mining and geoscience.

CORE SKILLS

- **Geoscience:** Petrophysics, reservoir characterisation, well-log & core data analysis, porosity / water saturation / sand-shale ratio, rock physics, field data acquisition; oil & gas / subsurface datasets.
- **Programming:** Python (incl. SDK maintenance), Go, TypeScript / Node.js (NestJS), SQL (MySQL, PostgreSQL, Oracle), NoSQL (MongoDB), Redis.
- **Data & systems:** REST API design, data migration & ETL pipelines, high-throughput batch processing, concurrency (worker pools, message queues), database / ERD design, idempotent & fault-tolerant workflows.
- **AI & tooling:** Claude Code (daily agentic coding), Git; exposure to ML workflows and Python data libraries.
- **Communication:** Technical planning documents, API specifications, cross-functional and stakeholder communication.

EXPERIENCE

Backend Engineer PT. Elektronik Distribusi Otomatisasi Terkemuka (Nabati Group)
Bandung, Indonesia | Aug 2021 – Present

- Design and ship production REST APIs end-to-end — from database/ERD design through to live production — across multiple business units, using Go and NestJS with MySQL and MongoDB.
- Build and maintain an internal Python SDK used across services, and use Claude Code daily as my primary agentic development tool (since March 2025).
- Design and run large-scale data migrations from SAP into an in-house SaaS — building idempotent, fault-tolerant pipelines (Redis-based idempotency flags, scheduler with cron fallback) to move business-critical data with no duplication, for both one-off big-bang and scheduled loads.
- Engineer high-throughput data processing: import 100k+ records per batch from spreadsheets using worker pools and message-queue / channel concurrency to build user segmentation in minutes without overloading servers.
- Author technical planning documents from product requirements — database design, high-level flows and API specs that other engineers build against (e.g. Notification Engine, Role-Based Access Control), translating constraints for both engineers and stakeholders.
- Lead engineer (under Tech Lead) on the company notification engine (Go, MongoDB, self-hosted Novu + Firebase, dkron scheduler); designed cross-business-unit integrations and a new B2B flow connecting sister FMCG companies.

Petrophysics & Research Assistant Pusat Studi Energi, Universitas Padjadjaran
Bandung, Indonesia | Jan 2020 – Jan 2021

- Characterised oil & gas reservoirs from well-log and core data — quantifying rock density, pore pressure, electrical and acoustic rock properties, and radioactivity.
- Derived petrophysical properties (sand-shale ratio, porosity, water saturation, rock physics) to estimate reservoir extent and hydrocarbon reserves for the geology team.

- Collected raw field data and ran experiments to research protocol; contributed to a study estimating hydrocarbon potential in the Bogor Basin.

Frontend Developer PT Panda Advis Teknologi (Pandatech)
Jakarta, Indonesia | Jun 2021 – Aug 2021

- Built user-facing features for a fitness platform across mobile (iOS/Android) and web (CMS) using reusable React / React Native components.

EDUCATION

Bachelor of Geological Engineering — Universitas Padjadjaran *(2015 – 2019)* | GPA 3.60
Full Stack JavaScript Developer Program — Hacktiv8 Indonesia *(2021)* | Grade 100.47 — Teacher's Award (Excellent)
